Routing of Telephone Calls – Developed with PHP

I developed this project as per given instruction manual. Some necessary information given below -

Programming Language: PHP

PHP Version:

Used IDE:
I have developed, executed and tested the project using *NetBeans IDE 8.2.* I would recommend the same environment for testing.

Operating System: Ubuntu 18.04.1 LTS

Project Directory Structure:
Root Directory – programming-exercise
Script File Path – programming-exercise => index.php

Testing Instruction:
Initially two operators (Operator-A & Operator-B) are given. If you want to test the script with more operators' data (Operator-C & Operator-D), then please uncomment the following commented code lines of function: *getTelephoneOperators().*

```
24              ),
25    //            // Uncomment Operator-C and Operator-D if you want to check with
26    //            "Operator-C" => array(
27    //                "1" => 2.0,
28    //                "44" => 1.0,
29    //                "46" => 3.0,
30    //                "46725" => 4.0,
31    //                "467" => 1.2,
32    //                "4672" => 2.0
33    //            ),
34    //            "Operator-D" => array(
35    //                "46" => 4.0,
36    //                "467" => 2.0,
37    //                "46725" => 3.0,
38    //                "4672" => 1.0,
39    //                "48" => 3.0
40    //            )
```
